

Sausal Creek Watershed Plant Communities

The following tables show the major plant communities of the Sausal Creek Watershed, and plants found in each. Martha Lowe compiled the original list, for her Master's thesis on the Sausal Creek Watershed. Recently-discovered species have been added; habitat information is derived from *The Jepson Manual*, CalFlora, and personal observations.

This list can help you identify plants as you explore the watershed and nearby areas. If you live in the watershed, and want to add native species to your home garden, this list can also help you select plants. For example, if you're looking for something to plant under a large Coast Live Oak, check the Oak Woodland list for shrubs and perennials that would be happy in dry shade.

The plant communities included are:

- Aquatic, plants that grow in water
- Meadow, Seep, plants that grow in open freshwater meadows and seeps
- Riparian, plants that grow near creeks and depend on groundwater
- Grassland, grasses, annual, and perennial plants of open grassland
- Chaparral, plants that live in hot, arid conditions
- Coastal Scrub, a community of shrubs, grasses, annuals and perennials on sunny hillsides
- Woodland, plants that inhabit the understory of various woodland communities
- Oak woodland, Coast live oaks and their understory plants
- Mixed Hardwood Forest, with trees such as Madrone, Buckeye and Bay as well as Oaks'
- Bay forest, dominated by the dense canopy of huge Bay trees, this small group of plants can survive in the heavy shade
- Redwood forest, our coast redwoods and their understory plants
- Monterey pine forest, plants that live under this much planted tree that's not native to the watershed
- Disturbed areas, plants that you're likely to see along streets and trails

The plant types in the tables are:

Type	Description
A	Annual
F	Fern
G	Grass
P	Perennial
S	Shrub
T	Tree
V	Vine
